

Environmental Management Indicators - the SURA Business Group

2021

ENVIRONMENTAL MANAGEMENT INDICATORS 2021

SURA BUSINESS GROUP

As investors, we take responsibility for inculcating a corporate respect for the environment while taking a long-term view of environmental conservation in order to meet the expectations of our stakeholders. One of our work fronts, in this respect, is environmental impact management, which is measured using a series of indicators relating to the environmental performance of the Companies that form part of the SURA Business Group. The indicators presented below include consolidated information from our subsidiaries Suramericana and SURA Asset Management:

305-1

CO₂ Emissions - Scope 1

These are defined as carbon emissions from the burning of fuels for use with the Company's own vehicles and corporate aircraft (own mobile sources), power plants (own stationary sources) and refrigerants for use in air conditioning equipment (fugitive emissions).

Emissions - Scope 1	2018	2019	2020	2021
Total Scope 1 Emissions (ton CO ₂ e)	4,074	3,444	2,622	2,098
Data coverage (% of direct employees)	99%	97%	97%	99%

Emissions from our own sources in 2021 were reduced significantly, mainly due to lower consumption of refrigerants for air conditioners and lower use of our own vehicles for commuting purposes. This was due to having introduced remote working arrangements in response to the COVID-19 pandemic.

305-2

Emissions - Scope 2

These are defined as emissions derived from the consumption of purchased energy on the part of the Colombian National Electricity Grid (Sistemas Interconectados Nacionales.).

Emissions - Scope 2	2018	2019	2020	2021
Total Scope 2 Emissions (ton CO ₂ e)	7,719	7,722	4,458	4,586
Data coverage (% of direct employees)	95%	98%	97%	98%

The reduction in emissions from energy consumption was due to having introduced remote working arrangements in response to the COVID-19 pandemic.

302-1.

Energy consumption

This indicator corresponds to the consumption of electricity purchased through the different operators in each of the countries where we are present as well as our direct energy consumption. This is classified as renewable and non-renewable according to the proportion generated by source of each of national systems making up the Colombian Electricity Grid.

Energy consumption	2018	2019	2020	2021
Total energy consumption (Mwh) (Scope 1 + Scope 2)	59,704	57,514	45,294	59,546
Data coverage (% of direct employees)	100%	100%	100%	98%

All purchased electricity consumed by Suramericana, and Grupo SURA comes from renewable sources, this due to our purchases of I-REC certified energy^{1*}..

303-3

Water consumption

This indicator refers to the volume of water, measured in cubic meters, consumed at the different headquarters and local offices belonging to the SURA Business Group, this sourced from the local water mains (municipal water supplies).

Water consumption	2018	2019	2020	2021
Total water consumption - in millions of m ³	0,353	0.314	0.203	0.212
Data coverage (% of direct employees)	85,1	91%	86%	92%

¹ This is a non-profit Association located in the Netherlands, which provides a standard for tracking the attributes of electrical energy from renewable sources.

306-2

Waste management

The table below shows the amounts of waste generated, used and disposed of by the Companies that form part of the Business Group. In the case of Suramericana, this information corresponds mainly to hazardous waste generated by its health care subsidiaries as well as its National Salvage Center, which must be disposed of in a special manner in order to comply with current environmental regulations.

Waste management (in metric tons)	2018	2019	2020	2021
Waste generated	1,410.47	1,382.88	1,587.53	2,317.04
Recycled waste	659.00	386.82	176.56	369,91
Waste disposed of	751.75	996.06	1,410.97	1,947.13
Data coverage (% of direct employees)	57.8%	51.5%	40%	82%

The increase in waste generated and disposed of was due to the fact that the consolidated figures included our own health care providers, which belong to our subsidiary Suramericana.

Emissions from business trips

These corresponds to emissions generated by business trips using the Company's own fleets of vehicles:

Kilometers traveled	2018	2019	2020	2021
Emissions from business trips	2,001.42	1,047.40	152,08	1,320.31
Data coverage (% of direct employees)	89%	99%	97%	99%

The SURA Business Group's environmental management function included all the corresponding indicators, but its main efforts were focused on handling its energy and water consumption

as well as carbon emissions (Scopes 1 and 2), achieving a coverage of more than 75% of the total number of employees.
